

Ambulatory Clinical Documentation Improvement

Healthcare providers are increasingly accepting financial risk associated with patient management. A CDI program that covers both hospital inpatient and ambulatory settings helps improve the accuracy of risk scores while mitigating the impact associated with inaccurate coding.

Accurate documentation, coding and reporting enhance data integrity, supporting key performance programs across the continuum.

- Merit Based Incentive System (MIPS)
- Alternate Payment Models (APM)
 - Accountable Care Organizations (ACOs)
 - Comprehensive Care for Joint Replacement (CJR) Model
- Medicare Advantage
- Hospital Acquired Condition (HAC) Reduction Program
- Hospital Value-Based Purchasing (VBP) Program
- Hospital Readmission Reduction Program (HRRP)

Explore the Enjoin Advantage

Enjoin helps clients set clear CDI goals in the ambulatory setting so you know where to start, and what to expect. By focusing on your specific education needs, we ensure an accurate Risk Adjustment Factor (RAF) score, capture of Hierarchical Condition Category (HCCs), quality performance and reimbursement.

The purpose of risk adjusted payment methodologies that use Hierarchical Condition Category (HCCs) is to promote fair provider payments that reward efficiency and encourage quality of care for the chronically ill patient population. By focusing on comprehensive risk-adjustment, we ensure the data integrity that's necessary to effectively drive population health management.

A successful ambulatory CDI program:

- **Strengthens** documentation infrastructure for point-of-care capture.
- **Effects** documentation and coding to establish chronic disease burden and predicted expenditures (HCC coding and reporting).
- **Defines** an appropriate RAF score, thereby, proper reimbursement.
- **Supports** care delivery and continued process improvement through enhanced data quality, including claims-based inpatient performance measures.
- **Reduces** audit risks and/or denials with increased specificity justifying cost and medical necessity.

Benefits of Enjoin's Ambulatory CDI Program

- Customized program to optimize impact
- Immediate results with physician integration
- Long-term success with care team education and physician engagement

Physician Directed Clinical Documentation Integrity

Ambulatory Clinical Documentation Improvement

Why Enjoin?

Enjoin delivers a comprehensive solution for advancing clinical documentation integrity. With thirty years of direct physician leadership, our team ensures evidenced-based care is accurately reflected through precise documentation and coding for value-based reimbursement. Whether inpatient or ambulatory, the precision of healthcare data defines risk-adjusted value-based outcomes through reliable documentation and coding.

Led by expert physicians with coding and documentation credentials, our clients achieve demonstrable improvements in CMI, coding accuracy, quality metrics, risk adjustment, and physician alignment—with an average return on investment of more than 700%.

Physician-led. Quality Driven.

Enjoin helps organizations elevate their current CDI programs to achieve clinical documentation integrity for value-based care initiatives and other alternative payment models. By focusing on inpatient and ambulatory documentation and coding precision, we help clients identify, understand, and mitigate the financial vulnerabilities associated with risk-adjusted value-based outcomes.

Elevate your CDI program

Increase physician engagement and elevate your clinical documentation with our proven, evidence-based, physician-led approach. Contact us today at info@enjoincdi.com.

CDI Services

- CDI Assessment
- CDS Training Seminar
- CDI Program Implementation or Reinvigoration
- CDI Program Auditing and Education
- Ambulatory CDI
- CDI[®] Elevated | Advanced Quality Measures Training and Program Initiation
- Provider Development
