ICD-10 Physician Education
For Physicians. By Physicians.

One of the largest problems for ICD-10 will be insufficient documentation to support ICD-10 code sets. A recent study noted 88 percent of respondents are concerned or very concerned about the expected changes to clinical documentation*.

Huff DRG Review provides a personal physician education program focused on tailored ICD-10 clinical concepts—and how they impact the delivery of care. Our physicians are practicing physicians and encounter the same issues on a daily basis that you do. The result?

- Targeted programs address your unique documentation gaps.
- Physician time is respected. No time is wasted.
- Physicians trained by peers to ensure a deeper understanding of ICD-10 documentation requirements.

Because it’s not just about the codes. Most physicians are equally interested in better documenting patients’ conditions. Huff DRG Review provides peer-to-peer, specialty-specific education regarding ICD-10 documentation requirements. We are an integral part of your overall ICD-10 transition.

Because physician time is valuable. Our first step is physician documentation pre-assessments. We quickly identify and educate physicians on their specific documentation gaps. Customized training stays relevant to the issues and problems we find. No time wasted. No dollars denied.
