

## PRE-VISIT PLANNING

### Enjoin helps providers paint the full patient picture

Enjoin provides pre-visit planning for a more accurate picture of patient populations—severity, complexity and chronic conditions. We conduct pre-visit planning reviews based on patient schedules to assist providers with capturing all conditions of their patient population.

### Our pre-visit planning encourages active learning for providers and elevates the capture of HCCs

With 30 years of direct physician leadership, we educate providers on the nuances of capturing diagnoses for risk adjustment and HCC opportunities.

Enjoin uncovers an average of 33% opportunity for risk score improvement. At one client site alone, 57% of patients had HCC opportunity. Moving your risk score by .05 can equate to \$480 per patient (based on per member per month (PMPM) rate of \$800).

#### Here's what's included:

- Analysis of patient population
- Identification of suspect conditions and compliance opportunities
- Continuous data refresh and analysis to monitor performance
- Initial and subsequent reviews by clinical coding analysts
- Documentation captured: patient information, HCC details
- Summary, detail and trend reports in client portal

#### Why Pre-Visit Planning?

- Provides an accurate picture of patient severity
- Promotes a proactive solution to taking care of patients
- Enhances patient experience
- Reduces level of frustration (of both physician and patient)
- Saves time and money

**Capturing chronic conditions at least once per year is critical to accurately reflect the complexity of each member of the patient population. Paint the full patient picture with Enjoin.**

## Explore the Enjoin Method

By focusing on comprehensive risk-adjustment, we ensure data integrity that's necessary to effectively drive population health management.

Our proven approach can be applied across any care setting, uniting documentation and coding for quality and cost justification. Enjoin's tools empower organizations to transform their clinical documentation practices using sustainable solutions.

### Educate

Identify vulnerabilities through data analysis, chart reviews and CDI process assessment, with interwoven education on opportunity areas.

### Empower

Ensure long-term collaboration among the CDI team and providers with focused instruction across the continuum.

### Elevate

Increase revenue, optimize value-based quality outcomes and improve physician engagement.

## Advancing CDI Together
